### Chapter 2 — INTERNATIONAL FRAMEWORK

#### 2:30 — CLIMATE CHANGE OUTSIDE THE UNFCCC AND KYOTO PROTOCOL: TRADE, HUMAN RIGHTS AND OTHER TREATIES

<table>
<thead>
<tr>
<th>2:30.10</th>
<th>Trade Treaties and Climate Change Issues</th>
</tr>
</thead>
<tbody>
<tr>
<td>2:30.10.30</td>
<td>Treatment of Climate Change Issues Under Trade Treaties</td>
</tr>
</tbody>
</table>

#### 2:30.10.30(a) — Alleged Discrimination Against Imports

- Legislation is not directed specifically at imports, companies that produce oil from Alberta's oil sands and want to sell it to the U.S. are acutely aware that these domestic restrictions

- In levels of GHG emissions emerge. For example, two products, such as oil produced from oil sands and oil from other arguably cleaner sources, may have the same physical characteristics

#### 2:30.10.30(b) — Alleged Violation of Investment Treaties

#### 2:30.10.30(c) — Subsidy-Related Claims
2:30.10.30(a) — Alleged Discrimination Against Imports

Climate change measures are likely to affect imported products in a number of ways. In some cases, climate change measures may be directed specifically at imported products. In recent years, there has been increasing discussion of the potential use of "green" tariffs or import restrictions being used in respect of the importation of products whose use or production is associated with high levels of GHG emissions. In 2010, for example, the U.S. Congress considered draft legislation which, among other things, would have directed the U.S. Administration in certain circumstances to establish a "border adjustment program" under which certain foreign manufacturers and importers would be required to obtain special allowances to account for the carbon content of goods they brought into the United States. In other cases, climate change measures, such as technical standards, taxes or government procurement policies, may apply to both domestic and imported goods, but may still be challenged by importers. For example, in the area of government procurement, the U.S. Congress has adopted legislation — s. 526 of the U.S. Energy Independence and Security Act of 2007 — which bars U.S. federal agencies such as the military and the postal service from buying synthetic or unconventional fuels if they create more greenhouse gases emissions than conventional fuels. Although this legislation is not directed specifically at imports, companies that produce oil from Alberta’s oil sands and want to sell it to the U.S. are acutely aware that these domestic restrictions may have significant effects on their ability to market their products in the United States.

The most likely challenge to these kinds of measures will be that they treat "like products" differently, in violation of Article I (most-favoured nation treatment) and Article III (national treatment) of the GATT or, in the case of import restrictions, that they violate Article XI of the GATT. Depending on the nature of the measure, it might also be argued that the measure does not comply with the provisions of the TBT agreement. As discussed below, the fundamental question in most of these cases will be whether the measure in question can be justified under the GATT Article XX provisions discussed above. In addition, depending on the facts, there may be strong arguments that the products in question are not "like products" or there is no discrimination between domestic and imported products, as required to find a violation of Article I, or between imported products, as required with respect to Article III.

To understand the question of whether or not products are likely to be considered "like products" under GATT Articles I or III, it is useful to consider the different kinds of products with respect to which these measures might be applied. If the climate change measure penalizes products based on the emissions associated with their use, the state defending the measure might credibly argue that the products being compared are not like products. For example, a government may discriminate between fuel-efficient and fuel-inefficient motor vehicles, imposing a tax or other restriction on sales of gasoline-powered cars and more favourable taxes on fuel cell cars. In this case, the Appellate Body's decision in the Asbestos case, discussed
