Conservation Offset Policy for Alberta: A Comparative Legal Analysis

Poulton, David William (University of Calgary, Law, Graduate Studies, 2014-09-23)

The Province of Alberta has expressed an interest in conservation offsets as a new policy tool to promote land stewardship. The tool is enabled by provisions of the Alberta Land Stewardship Act. This thesis explores what ...
Conservation Offset Policy for Alberta: A Comparative Legal Analysis

Abstract
The Province of Alberta has expressed an interest in conservation offsets as a new policy tool to promote land stewardship. The tool is enabled by provisions of the Alberta Land Stewardship Act. This thesis explores what Alberta must do in order to develop and implement an effective and credible conservation offset mechanism. It reviews the concept of conservation offsets and some of the key issues inherent to it. Focussing primarily on legal and regulatory aspects, it reviews the experience of conservation offset regimes for wetlands in the United States and for native vegetation in the State of Victoria, Australia. Drawing lessons from each of these case studies, it considers Alberta's policy position and makes recommendations for bringing an Alberta conservation offset system to fruition.

IN PARTIAL FULFILMENT OF THE REQUIREMENTS FOR THE
DEGREE OF MASTER OF LAWS
Q. How do I build advanced searches in PRISM?

The Basic Search and Advanced Search features in PRISM are powered by Apache's Lucene text search engine. View full documentation on Apache Lucene - Query Parser Syntax or check out some of the quick tricks and tips below.

Complex queries can be carried out with the syntax provided by Lucene's text search engine. These queries can be set in the first (top) search box, like this:

**Search**

- The drop-down menu allows you to search **All of PRISM**.
- Use the format: 
  ```
  type:thesis AND title:law
  ```

Click Go to execute the search.

**Phrase searching**

Double quotes must surround phrases or words within the phrase will be treated as separate search terms in full text. This means the query below would return results from full text, unless the search was set in a specific field, such as the title or abstract.

**Example:** if you wanted to search for the phrase decision tree then it should appear as follows.

"decision tree"

**Search within a specific field**

You can search within a specific field by designating the Dublin core metadata field you would like to search, followed by a semi-colon and then the search string.

**Example:** To search for the phrase decision tree in the title field you would input:

`title:"decision tree"`

Updated search instructions available at https://libanswers.ucalgary.ca/faq/199682
Instructions for Advanced Searches in PRISM

Updated search instructions available at https://libanswers.ucalgary.ca/faq/199682

Search for a specific author:
To search for a name in the author field, input:
Example: author:smith OR author:"smith, john" OR author:"smith, john a"

Search for a specific advisor:
To search for a name in the advisor field, input:
Example: dc.contributor.advisor:smith

Using a wildcard
A single character wildcard is denoted by ? while a multiple character wildcard is denoted by *.
(Don’t use this feature with double quotes, or it will treat your wildcard search as an exact phrase, that is, as a word containing ? or *).
Example: A single character wildcard search to retrieve woman, women in full text:
wom?n
Example: A multiple character wildcard search, to retrieve secure, security in the title field:
title:secur*

Fuzzy search
A fuzzy search works only with single terms and is appropriate when you want to cast a broad net and is denoted by “~”. This may be a useful if you are searching for an acronym but are unsure about its exact spelling and usage.
Example: A fuzzy search:
nsp~
You can specify how fuzzy the search should be by adding a value from 0 (more fuzzy) to 1 (less fuzzy). The default is 0.5
Example: nsp~0.1

Proximity search
A proximity search allows terms to be searched for on the condition that each word specified is within a certain number of words away from the other(s). A proximity search is denoted with a “~” at the end of a set of words in double quotes, and a value that indicates the maximum numbers of words that separate the terms.
Example: To search for “decision” and “tree” within the same sentence you could input:
Instructions for Advanced Searches in PRISM

Updated search instructions available at https://libanswers.ucalgary.ca/faq/199682

Boosting a search term
If you are performing a multiple term search, you can increase the weight of a term's relevance to the search by using the ^ symbol and a boost factor.

Example: "decision tree" ^5

Boolean operators
Boolean operators can add logical structures to searches. Available operators include AND, +, OR, NOT, and -.
Operators must be in upper case: AND, NOT, OR

Example:
decision AND tree ...will return documents that contain both terms in full text.
decision +tree ...will return documents that contain both decision and tree in full text.
decision OR tree ...will return documents that contain decision or tree, in full text
decision NOT tree ...will return documents that contain decision but not tree.
decision -tree ...will also return documents that contain decision but not tree.
title:decision AND title:tree ...will return documents that contain decision and tree, with both terms in the title field.

Grouping
Logical structures can be grouped together by using parentheses.

Example:
"decision tree" AND ("University of Calgary" OR UCalgary)

Date ranges
Find a span of documents published during a period of time. DateIssued is the publish date.

Example:
dateIssued:[1986 TO 1990]

   - Institution: University of Calgary
   - Online access
The Alberta Energy and Utilities Board: ecological integrity and the law
Shaun Fluker
Thesis (LL.M.)--University of Calgary, Faculty of Law, 2004.

Available at Law Library, Special Collections (AC1.T484 2004 F55) and other locations

REQUEST OPTIONS: Request

Law Library > Special Collections > AC1.T484 2004 F55
(1 copy, 1 available, 0 requests)

Law Library > Main collection > AC1.T484 2004 F55
(1 copy, 1 available, 0 requests)
To find theses, you need to know:

- When it was written
  - Older may be print only and in archives
  - Copyright legislation can govern electronic availability
- The degree-granting institution/school

The Faculty of Graduate Studies changed processes in June 2012

- Earlier theses may be in the institutional repository (PRISM) or ProQuest Dissertations & Theses (at least the metadata will be available)

Like legal research generally, there is not one place to find all theses.
Materials from the Law 703 library sessions are in the Graduate Law Guide at [http://library.ucalgary.ca/guides/LLM](http://library.ucalgary.ca/guides/LLM)

For reference, the following topics were covered in the Fall:

- Commentary Overview class
  - Library search box
  - Library catalogue
  - ProQuest Dissertations & Theses (full database)
- Commentary Search Tips class
  - Google Scholar
  - WorldCat
- Foreign Law class
  - Center for Research Libraries (CRL)
